

N0PGI AllStar Link 2-Meter

Simplex Node

147.570 Mhz 162.2 CTCSS

Allstar Link Node# 29875

Cherryvale, Kansas

60 Watts (10-20 mile local range from Cherryvale)

**Talk all over the USA and world using an
ordinary 2-Meter transceiver.**

(This is a simplex node only-not a repeater. There is no offset. You must let the node signal drop before attempting to transmit. Allow 3-4 seconds between transmissions.)

Simplex Node N0PGI is usually connected full-time to the WIN System which is based in Los Angeles, CA. It is a very busy system. It runs on IRLP Reflector 9100. You can almost always find someone to talk to, day and night. It covers much of California, and is linked full time to 71 repeaters in 16 states and 4 countries around the world. There are also any number of IRLP and Allstar simplex nodes connected at any one time.
